

**UNIVERSITI PUTRA MALAYSIA**

**DISTRIBUTION AND PATHOGENIC POTENTIAL  
OF SOIL FUSARIA FROM SELECTED OIL  
PALM HABITATS IN WEST MALAYSIA**

**HO YIN WAN**

**FP 1984 3**

It is hereby certified that we have read this thesis entitled "Distribution and Pathogenic Potential of Soil Fusaria From Selected Oil Palm Habitats in West Malaysia" by Ho Yin Wan, and in our opinion it is satisfactory in terms of scope, quality and presentation as partial fulfilment of the requirements of the degree of Doctor of Philosophy.

ABDUL RAHMAN RAZAK, Ph.D.

Associate Professor & Head Dept. of Plant Protection  
Universiti Pertanian Malaysia.  
(Chairman Board of Examiners)

PAUL E. NELSON, Ph.D.

Professor, Dept. of Plant Pathology,  
College of Agriculture,  
The Pennsylvania State University,  
U.S.A.  
(External Examiner)

LIM WENG HEE, Ph.D.

Principal Research Officer,  
Malaysian Agricultural Research &  
Development Institute.  
(External Examiner)

SARIAH MEON, Ph.D.

Lecturer, Dept. of Plant Protection,  
Faculty of Agriculture,  
Universiti Pertanian Malaysia.  
(Internal Examiner)

GEORGE VARGHESE, Ph.D.

Professor, Dept. of Plant Protection,  
Faculty of Agriculture,  
Universiti Pertanian Malaysia  
(Internal Examiner & Supervisor)

This thesis was submitted to the Senate of  
the Universiti Pertanian Malaysia and was accepted  
as partial fulfilment of the requirements for the  
degree of Doctor of Philosophy.

May, 1984

AHMAD MAHDZAN AYOB, Ph.D.  
Professor &  
Dean of Graduate Studies.

Distribution and pathogenic potential  
of soil fusaria from selected oil  
palm habitats in West Malaysia

by

HO YIN WAN

A thesis  
submitted in partial fulfilment  
of the requirement for the degree of  
Doctor of Philosophy in the Dept. of Plant Protection,  
Faculty of Agriculture, Universiti Pertanian Malaysia  
(University of Agriculture Malaysia)

March 1984

## ACKNOWLEDGEMENTS

I wish to express my appreciation and sincere gratitude to my supervisor, Professor G. Varghese of the Plant Protection Department, Faculty of Agriculture, University of Agriculture Malaysia, for initiating this research project and for his invaluable guidance and advice throughout the course of this study and in the preparation of this manuscript.

I am also much indebted to Dr. G.S. Taylor, Botany Department, University of Manchester, England for supervising the studies conducted in England and who has offered many helpful comments and suggestions regarding those studies and in the preparation of this manuscript and to Professor J. Colhoun, Emeritus Professor, University of Manchester for being a consultant to this project, to Dr. D. Moore, Genetics Department, University of Manchester and Dr. M. Emes, Physiology Department, University of Manchester for their help and advice on the electrophoretic studies.

I also wish to acknowledge with thanks Mr. A. Johnston, Director of the Commonwealth Mycological Institute, Kew, England for permission to use the Institute's facilities and to Dr. C. Booth, of the Commonwealth Mycological Institute who confirmed all my identifications of the Fusarium species and who very kindly let me have access to his excellent collection of publications on Fusarium

by workers all over the world.

The statistical advice and assistance of Dr. Yap Thoo Chai of the Agronomy Department, University of Agriculture Malaysia, Dr. D.K. Friesen of Soil Science Department, University of Agriculture Malaysia, and Dr. Quah Soon Cheang of Biology Department, University of Agriculture Malaysia have been invaluable and are therefore gratefully acknowledged.

Appreciation is extended to the technical staff of both University of Manchester and University of Agriculture Malaysia for their co-operation and assistance in the laboratory and field, to Socfin Company Limited, Malaysia and Binga Plantations, Unilever Limited, Zaire for supplying oil palm seeds and seedlings and to Kumpulan Guthrie Sendirian Berhad, United Plantations Berhad, Highland and Lowlands Berhad and Kumpulan Ladang-Ladang Trengganu for their assistance and permission to sample soil in their oil palm estates.

I am grateful to the Inter-University Council for Higher Education Overseas for the award of a fellowship which enables me to carry out part of the research in England.

Finally, I wish to thank my husband, Dr. Ong Seng Huat for his constant encouragement and support throughout this project especially during the period which I have to spent away from home in England.

ABSTRACT	xxi

CHAPTER I	INTRODUCTION	1
1.1	The genus <u>Fusarium</u>	1
1.2	Taxonomy of <u>Fusarium</u>	2
1.3	Biochemical approaches to taxonomy of <u>Fusarium</u>	9
	Electrophoretic studies	10
	Serological studies	11
1.4	Distribution of soil fusaria	15
1.5	Pathogenic significance of soil fusaria	18
	Vascular wilt of cotton	18
	Vascular wilt of banana	20
	Vascular wilt of date palm	21
	Vascular wilt of oil palm	22
1.6	Oil palm ( <u>Elaeis guineensis</u> Jacq.) as a plantation crop in Malaysia	26
1.7	Objectives of the present study	31

CHAPTER II	GENERAL METHODOLOGY AND TECHNIQUES	34
2.1	The fungus-culture techniques and identification	34
	Single spore isolation	34
	Decontaminating cultures	34
	Growing conditions for the fungus	35
	Stimulation of sporulation	36
	Preservation of cultures	37
2.2	The host - oil palm seedlings	39
	Germination of oil palm seeds	39
	Growing conditions for the oil palm seedlings	40
2.3	Preparation of inoculum	41
2.4	Inoculation of the oil palm seedlings	42
2.5	Prevention of cross contamination	43
2.6	Photography and drawings	44
2.7	Experimental design and statistical analysis	44
CHAPTER III	DISTRIBUTION OF SOIL FUSARIA IN OIL PALM HABITATS	46
	Materials and methods	46
	(i) Habitats	46
	(ii) Sampling method	48
	(iii) Isolation and enumeration of <u>Fusarium</u> species	52
	(iv) Isolation of <u>Fusarium</u> species from oil palm roots	53

	Results	54
	Discussion	71
CHAPTER IV	MORPHOLOGY AND IDENTIFICATION OF <u>FUSARIUM</u> ISOLATES	80
	Materials and methods	80
	Results	82
	Discussion	128
	Key to <u>Fusarium</u> species from oil palm soils in Malaysia	134
CHAPTER V	PATHOGENIC POTENTIAL OF SOIL FUSARIA FROM MALAYSIAN OIL PALM HABITATS	136
	Materials and methods	137
	Results	140
	Discussion	148
CHAPTER VI	PATHOGENICITY STUDIES OF MALAYSIAN <u>F. OXYSPORUM</u> AND AFRICAN <u>F.</u> <u>OXYSPORUM</u> f. sp. <u>ELAEIDIS</u>	151
6.1	Cross inoculation studies	153
	Materials and methods	153
	Results	163
	Discussion	174
6.2	Histopathology of Malaysian oil palm seedlings infected with pathogenic <u>F. oxysporum</u> isolates from Africa	177
	Materials and methods	178

Results	179
(i) Symptomology	180
(ii) Histology of uninoculated palms	188
(iii) Histology of inoculated palms	194
Discussion	211
CHAPTER VII COMPARATIVE STUDIES BETWEEN MALAYSIAN <u>F. OXYSPORUM</u> ISOLATES AND PATHOGENIC ISOLATES OF <u>F. OXYSPORUM</u> FROM AFRICA	220
7.1 Morphological comparisons	221
Materials and methods	221
(i) Light microscope studies	221
(ii) Scanning electron microscope (SEM) studies	221
Results	222
Discussion	233
7.2 Physiological comparisons	235
Materials and methods	235
(i) Effect of temperature	235
(ii) Effect of media	235
(iii) Effect of pH	236
Results and Discussion	237
7.3 Electrophoretic studies	246
Materials and methods	247

(i)	Culture methods and preparation of samples	247
(ii)	Preparation of extracts	247
(iii)	Determination of protein content in the extract	248
(iv)	Vertical disc-electrophoresis	248
(v)	Polyacrylamide iso-electric focusing	252
	Results	257
(i)	Vertical disc-electrophoresis	257
(ii)	Polyacrylamide iso-electric focusing	260
	Discussion	270
	CHAPTER VIII GENERAL DISCUSSION	276
	BIBLIOGRAPHY	285
	APPENDIX	
1	Composition of solid culture media used in this thesis	307
2	Composition of liquid media	309
3	Preparation of sections of palm materials for anatomical studies	310
4	Determination of protein content in extract - Lowry's Folin Test	314

## ABSTRACT

An Abstract of the thesis presented to the Senate of Universiti Pertanian Malaysia in partial fulfilment of the requirements for the Degree of Doctor of Philosophy

### DISTRIBUTION AND PATHOGENIC POTENTIAL OF SOIL FUSARIA FROM SELECTED OIL PALM HABITATS IN WEST MALAYSIA

A total of eight species and two varieties of Fusarium was isolated from the sampling sites in the oil palm habitat. Fusarium solani and Fusarium oxysporum were the most prevalent species followed by Fusarium semitectum. The other species and varieties isolated showed a more

sporadic occurrence. Generally, soils from oil palm rhizospheres and young palm areas contained a larger number and greater variety of Fusarium species than soils from the avenues and older palm areas.

Pathogenicity tests of Fusarium species isolated showed that none were capable of producing vascular wilt or other diseases on oil palm seedlings. Some of the isolates, however, caused a reduction of growth in the test seedlings.

Comparative studies of F. oxysporum isolates from oil palm habitat in Malaysia with F. oxysporum f. sp. elaeidis isolates from Africa showed that the two groups of isolates were indistinguishable in their cultural, morphological and isozyme characteristics. Subsequent pathogenicity tests proved that the F. oxysporum isolates from Africa were pathogenic, causing vascular wilt on the Malaysian oil palm seedlings whilst the F. oxysporum isolates from Malaysia were non-pathogenic to the wilt-susceptible African oil palm seedlings and Malaysian oil palm seedlings. Inoculation of Malaysian F. oxysporum isolates on Malaysian oil palm seedlings and wilt-susceptible African oil palm seedlings, subjected to an initial period of water stress, also did not result in showing any disease symptoms.

Histopathological studies of Malaysian oil palm seedlings inoculated with pathogenic F. oxysporum f. sp. elaeidis indicated that resistance of the symptomless palms to the vascular wilt is probably biochemical in nature.
